

SHUBHAM LAKHOTIA

Boston, MA | (857) 565 7206 | lakhotia.sh@northeastern.edu | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

EDUCATION

Northeastern University | Boston, MA

Expected Dec 2025

Master of Science in Information Systems | GPA:3.76

SRM Institute of Science and Technology | Chennai, IN

May 2017 - Jun 2021

Bachelor of Technology in Computer Science and Engineering | GPA:3.6

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, Golang, C#, TypeScript, HTML, CSS

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, Angular.js, Tailwind CSS, Material-UI, Redux, NumPy, Pandas

Databases: MySQL, Amazon RDS (Relational), MongoDB (NoSQL)

Cloud & DevOps: AWS, Digital Ocean, Azure, Docker, Terraform, Packer

Developer Tools: VS Code, Eclipse, GitHub, CI/CD, Jira

Others: Microservices, Linux, Object Oriented Programming, Agile Methodologies, RESTful APIs, GraphQL, TensorFlow, PyTorch

PROFESSIONAL EXPERIENCE

Senior Software Engineer - Jio Platforms Limited, Reliance Industries | Mumbai, IN

Aug 2022 - Dec 2023

- Redesigned the company's employee portal with Angular for the frontend and delivered a cross-platform interface that streamlined hiring, onboarding, engagement, and separation, enabling real-time employee interaction across devices
- Implemented an AI-based online proctoring system leveraging YOLO for face detection and CNN for eye and face movement tracking, preventing impersonation and malpractice while improving **accuracy by 22% and reducing false positives by 15%**
- Supervised the team of eight members in the implementation of a **micro-frontend architecture** with modular, scalable, independent components, resulting in a **30% increase** in application scalability and **20% reduction** in maintenance overhead
- Devised and delivered new API endpoints using Node.js and AWS, optimizing metadata management for employee records with structured JSON data, improving performance and scalability

Software Engineer - Jio Platforms Limited, Reliance Industries | Mumbai, IN

Jun 2021 - Jul 2022

- Managed and resolved a complex bug in the PeopleFirst employee portal, ensured seamless functionality, and prevented disabled modules from appearing to users, **enhancing the platform experience for over 100,000 employees**
- Spearheaded the development of reusable components and dynamic reactive forms, implemented Angular Material UI for visually appealing interfaces, and integrated Node.js with MongoDB for backend functionality, enhancing user experience
- Executed unit testing protocols for platform features, **resolved 90%** of functionality issues pre-deployment, and collaborated with the user acceptance testing team to ensure the platform met end-user requirements for a seamless user experience
- Automated deployment pipelines using CI/CD tools, accelerating delivery cycles and **reducing manual intervention by 40%**

ACADEMIC PROJECTS

GenAI Studio

Jan 2025 - Feb 2025

- Built a full-stack **AI-powered SaaS application** that generates and manages content using **Google Gemini AI**
- Crafted reusable components for an AI-powered web app using React.js, Next.js, TypeScript, and utilized Node.js for API creation
- Designed a dynamic template system for effortless AI-generated content customization and integrated a subscription-based model for secure payments and recurring billing

Cloud-Optimized Content Delivery Platform

Sep 2024 - Dec 2024

- Developed APIs using NodeJS with Amazon RDS as the database, deployed on an EC2 instance for high availability
- Integrated Amazon S3 for secure image storage, configured DNS with zone delegation and implemented load balancing to enhance routing efficiency, traffic distribution, and application reliability
- Leveraged Terraform for infrastructure as code and employed Packer to build custom images, enabling automated and consistent deployments, **reducing manual configuration time by 50%, and enhancing version control**
- Constructed and streamlined CI/CD pipelines on GitHub**, automating the build, test, and deployment processes, driving a 30% increase in deployment efficiency and eliminating substantial manual workload
- Used AWS Lambda functions to trigger automated user verification emails, enhancing authentication workflows

ThingsToDo (Event Management Website)

Feb 2024 - Apr 2024

- Engineered and deployed ThingsToDo a full-stack event management platform as a team using the MERN stack, with MongoDB for data storage, Express.js for server-side logic, React.js on the frontend and Node.js on the backend development
- Designed responsive frontend features and RESTful APIs for event listing, user authentication, and booking processes
- Achieved improved query speed using MongoDB, a NoSQL database, enhancing data scalability for future growth
